

- Process: Thermoplastic injection
- Material: PA66 GF 50
- Optimization:
 - A topological one → isotropic environment
 - A parametric one → anisotropic environment
- Criteria:
 - Mechanical stress
- Challenge:
 - Mass reduction

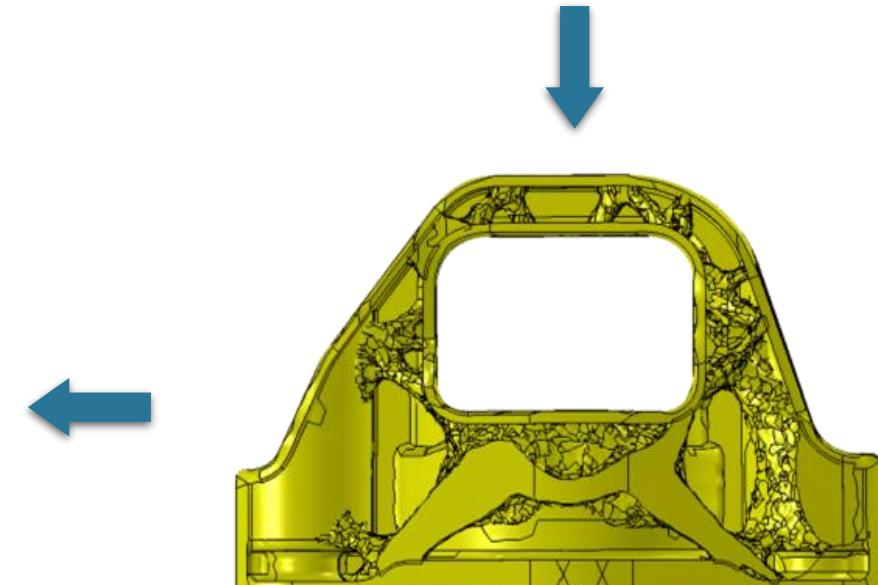

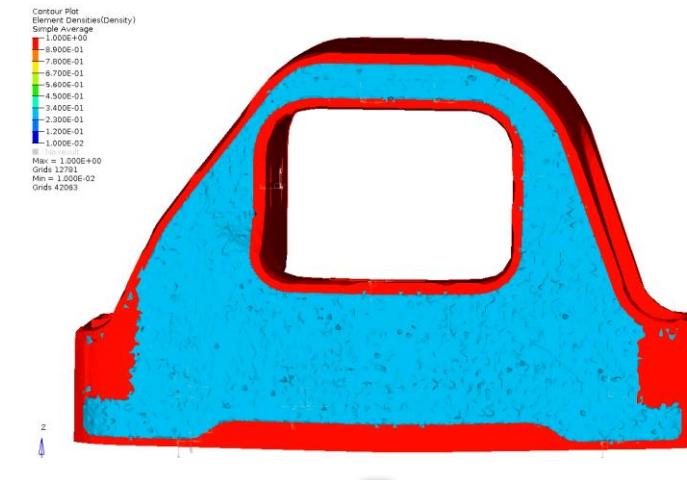

- Topological optimization – isotropic environment

1. Molding definition

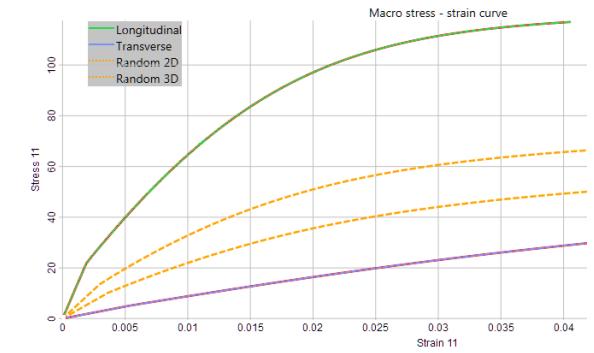

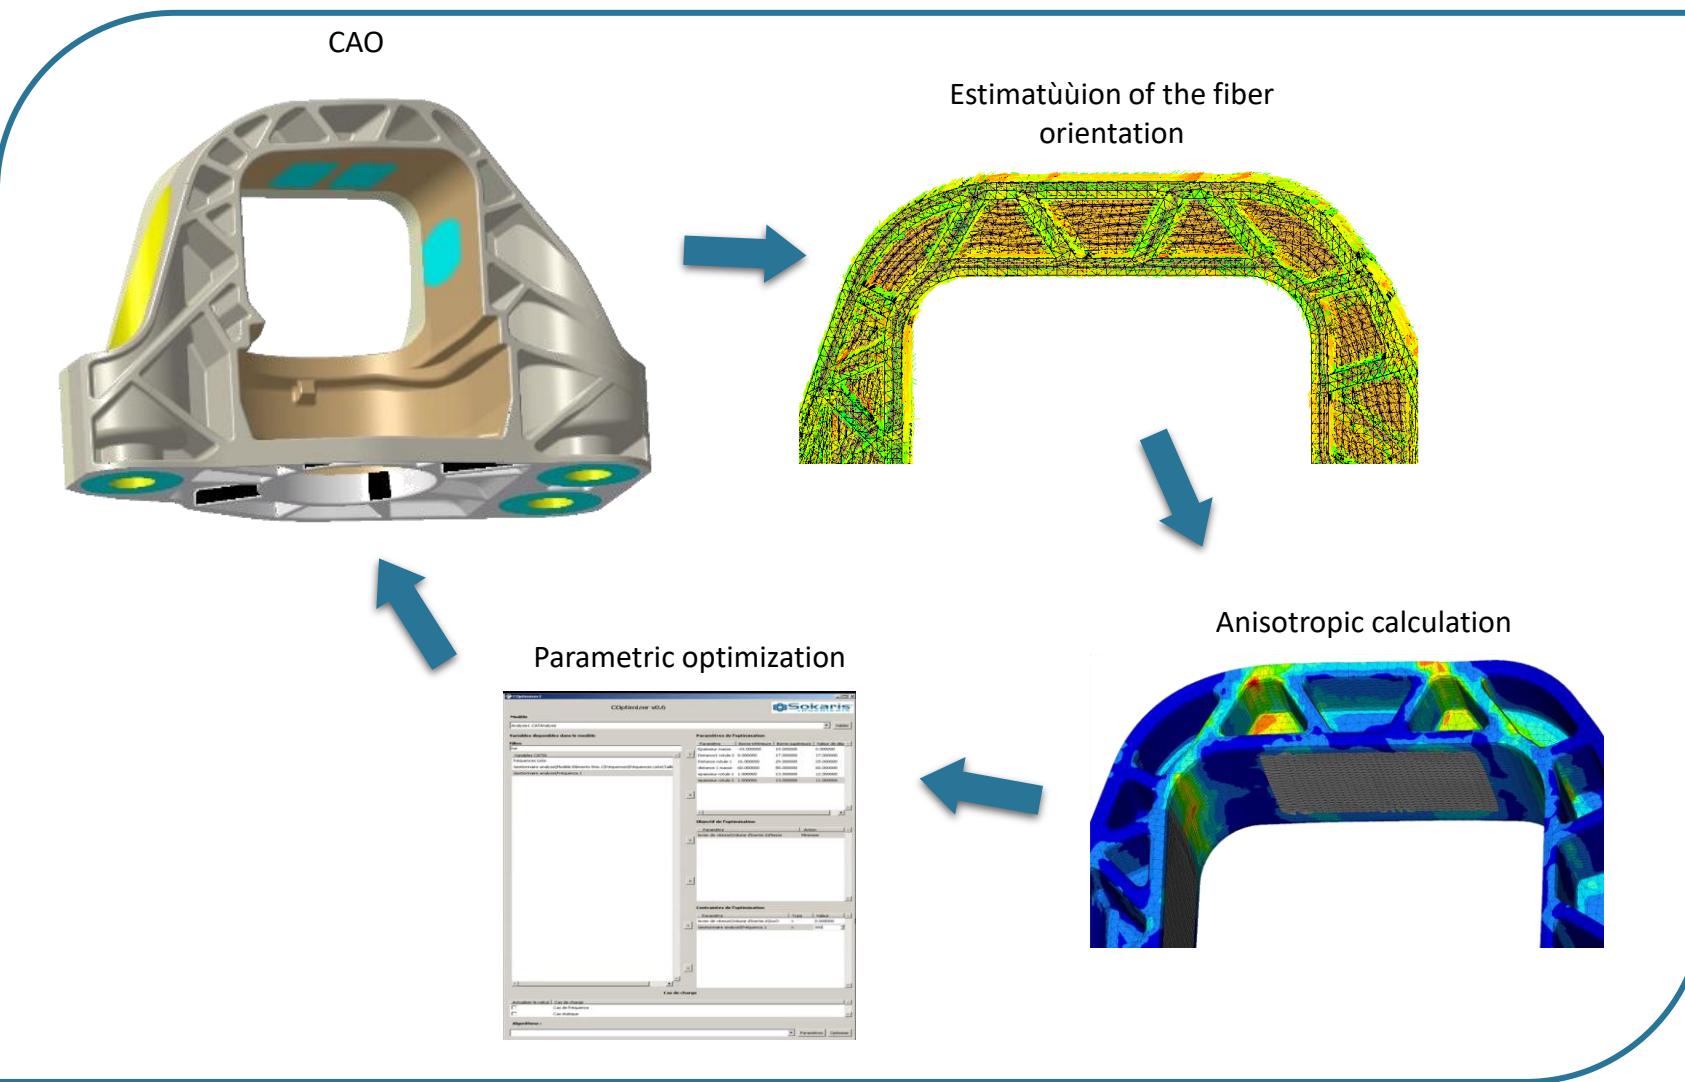

4. Interpretation of results

2. Topological optimization – isotropic environment

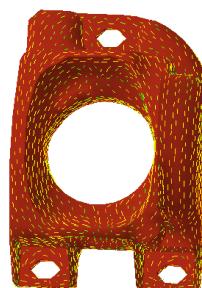

3. Analysis

- Parametric optimization – anisotropic environment

- Process: Thermoplastic injection
- Optimization:
 - A topological one → isotropic environment
 - A parametric one → anisotropic environment
- Criterias:
 - Dynamic behavior
 - Optimization of the dynamic stiffness

Top part PA6 GF40

Main part : PP GF50
